THE 3 D'S OF EFFICIENT MEDICATION MANAGEMENT

Mobility is key when it comes to medication management, that, and the ability to access your EHR/EMAR at the point of care is essential while dispensing meds to be able to see and record accurate data in real-time.

This seems like an easy solution with the right technology in place, however, not all technology is equal. We constantly meet providers that have portable laptops on their medcart. Laptops that:

- **need constant charging rendering the medcart stationary.**
- **keyboards that cannot be sanitized thoroughly as the nurses are going room to room, and**
- **Have cords and cables that become tripping hazards for seniors and nurses alike.**

All of these challenges can eat up your precious time.

There is a simpler, cleaner, more efficient way. Utilizing battery-powered Mobile Touchscreen Computers with your EMAR is game-changing. Leverage the latest in medical-grade mobile technology while focusing on three simple steps: **Don't Stop, Distribute, Document.**

DON'T STOP TO CHARGE

Our battery-operated mobile touchscreens keep your staff moving throughout their shift, ensuring smooth medication management on the go. Say goodbye to dead laptops, charging cords and cables and hello to efficiency at your fingertips.

DISTRIBUTE MEDICATION

Easily view your medication records via rugged, antimicrobial touchscreens with embedded privacy filters. Our devices are designed to simplify CNA workflows reducing the risk of errors and ultimately improving patient safety.

DOCUMENT REAL-TIME

Maximize efficiency and accuracy with real-time data capture in your EMAR. Our RxChange charging system keeps you fully charged and ready to document where and when you need it.

Experience efficiency in your medication management workflow, the way it should be.

Let us worry about keeping your medcart computer charged, clean and private so you can focus on caring for your patients and keeping your team up-to-date with accurate data.
